📁 Data Engineering Lead | Big Data | Databricks | PySpark | AI-Assisted Data Engineering

🔗 www.linkedin.com/in/rahul-kumar-05gd0386

Data Engineering Lead with 14+ years of experience designing and delivering large-scale data platforms, incentive & commission systems, and analytics solutions.

Strong expertise in Hadoop, Hive, PySpark, and enterprise data engineering, currently working on migration of legacy CDP/Hadoop workloads to Databricks Lakehouse Platform.

Hands-on exposure to Databricks Jobs, Workflows, Delta Lake, Playground, Genie, and AI-assisted development approaches. Actively leveraging tools like Claude and Generative AI assistants for code migration, documentation, SQL generation, and validation activities during modernization initiatives.

Passionate about exploring Agentic AI concepts and intelligent automation for data engineering and incentive rule processing.

Career Highlights

- 14+ years in Data Engineering & Analytics
- Leading enterprise Incentive & Commission platforms at Jio
- Working on CDP → Databricks migration initiatives
- Hands-on with PySpark, Hive, Databricks & AI-assisted engineering
- Experience leading teams and large-scale data modernization projects

Certifications

- Generative AI Foundations – Microsoft
- Data Science Foundation – LinkedIn Learning
- Analyzing Big Data with Hive – Coursera
- Tableau Essential Training
- Project Management Foundations
- AI Powered People Manager

Technical Skills

- **Big Data & Data Engineering:** Hadoop, Hive, HDFS, PySpark, Databricks, Delta Lake
- **Programming & Query Languages:** Python, SQL, PL/SQL
- **Workflow & Orchestration:** Airflow, Azkaban, Databricks Workflows
- **Databases:** Oracle, DB2, Sybase IQ
- **AI & Modern Engineering Tools:** Claude AI, Databricks Genie, Playground, AI-assisted code generation & validation
- **Visualization & Reporting:** Tableau, Excel (Advanced)
- **Domains:** Incentive & Commission Systems, Campaign Analytics
- **Version Control:** Git

Professional Experience

Reliance Jio Infocomm Ltd, Navi Mumbai

Manager – Data Engineering Lead

May 2016 – Present

Key Responsibilities

- Led a team of data engineers to design scalable **big data and incentive computation platforms** processing large-scale partner data.
- Built and optimized **PySpark-based pipelines** processing millions of transaction records for large-scale incentive and partner payout systems, improving processing efficiency and accuracy.
- Supporting modernization of enterprise data pipelines using distributed data processing and Lakehouse architecture concepts.
- Supporting enterprise incentive systems handling high-volume transaction and payout processing across nationwide partner ecosystems.

Databricks Migration & Modernization

Currently contributing to migration of Hadoop/CDP workloads to Databricks Lakehouse Platform.

Working on:

- Refactoring existing PySpark jobs for Databricks execution
- Working with Delta Lake concepts for modernized data processing and storage
- Exploring Databricks Jobs and Workflows for orchestration
- Supporting migration and validation activities for incentive processing pipelines

Using Claude AI and Generative AI tools for:

- SQL and PySpark code assistance
- Migration support and code refactoring
- Documentation and validation logic generation
- Faster debugging and development support

Exploring Databricks AI capabilities including:

- Genie
- Playground
- Agentic AI concepts and AI agents for automation use cases

Exploring AI-driven approaches for:

- Rule validation
- Exception handling
- Data quality checks
- Intelligent workflow automation

Data & Business Impact

- Reduced manual errors by 40%+ through automation of incentive processing
- Enabled real-time reporting dashboards (Tableau) for campaign performance
- Integrated data from CRM, MDM, and multiple enterprise sources, ensuring high data quality and consistency
- Supported business teams with data-driven targeting and segmentation strategies

Leadership

- Mentored junior engineers and drove adoption of modern data practices
- Collaborated with cross-functional teams (Finance, Marketing, IT) for enterprise-scale solutions

Bharti Airtel Ltd, Gurgaon

Executive – Data Analyst

Jul 2014 – May 2016

- Analyzed mobility and customer usage data across multiple lines of business to support targeted campaign design and execution.
- Worked closely with the Business Conversion and Forecasting team to deliver insights on customer behaviour, conversion rates, and revenue impact.
- Designed and maintained reports and dashboards to track campaign performance, retention metrics, and channel effectiveness.
- Contributed to segmentation logic and campaign tracking processes that supported data-driven decision-making by business stakeholders.

Elets Technomedia Pvt. Ltd., Noida

Junior Executive

Apr 2012 – July 2014

- Collected, validated, and analysed data from multiple sources to support pre-event planning and post-event reporting.
- Automated recurring reports using spreadsheets and formulas, improving reporting accuracy and reducing manual effort.
- Compiled attendee and engagement data to evaluate event impact and recommend improvements for future campaigns.
- Worked closely with sales, marketing, and editorial teams to ensure timely and accurate delivery of reports and insights.

Achievements

- Awarded Spotlight Award at Reliance Jio for Big Data migration success.
- Developed and automated PySpark-based incentive calculation pipelines using Airflow & Azkaban.
- Automated Tableau dashboards for real-time digital campaign reporting and business visibility.
- Implemented Airtel's Magic Multiple Posting Dashboard for campaign ROI.
- Automated incentive processes and created post-event reports at Elets.

Education

Master of Business Administration (IT & Marketing), GNIOT, Greater Noida – 2010–2012

Bachelor of Computer Application, Birla Institute of Technology, Ranchi – 2006 – 2010

Personal Details

Language Known: Hindi & English

Location: Maharashtra, India
